

Order Shoplytics

You can find information about the costs of Shoplytics at any time at <https://shoplytics.de/preis>.

When you are ready to book an instance of Shoplytics, you can order at the current price via <https://shoplytics.de/start>.

A few notes before ordering:

1. A Shoplytics instance is always valid for 1 website. However, if your interconnected website spans multiple domains, that is not a problem, e.g. a .DE domain and a .FR domain for the French channel of your Shopify store. The prerequisite is that the two domains use a common cookie banner (if a cookie banner is used at all), and that the data is not supposed to flow into separate advertising accounts. For separate data channels, separate Shoplytics accounts are also required.
2. If you need multiple Shoplytics instances, please order multiple times with different email addresses, so that multiple Shoplytics accounts are automatically created. (If you have many accounts, you can request a central manager login upon request, through which you can select all sub-accounts. Please request a manager account at support@shoplytics.de.)
3. Your Shoplytics account will be created automatically after booking, for the email address you entered during booking. [How do I get access to my Shoplytics account?](#)
4. After the order, you will receive an email with the order confirmation and invoice (from Digistore24) and an email from Shoplytics, in which we explain the **important first steps** so that your Shoplytics instance can be put into operation.
